Q. 1 How many 3-digit numbers can be formed from the digits 2, 3, 5, 6, 7 and 9, which are divisible by 5 and none of the digits is repeated?

- [A] 5
- [B] 10
- [C] 15
- [D] 20

Answer Option [D]

**Explanation:**

Since each desired number is divisible by 5, so we must have 5 at the unit place. So, there is 1 way of doing it. The tens place can now be filled by any of the remaining 5 digits (2, 3, 6, 7, 9). So, there are 5 ways of filling the tens place. The hundreds place can now be filled by any of the remaining 4 digits. So, there are 4 ways of filling it.  
∴ Required number of numbers =  $(1 \times 5 \times 4) = 20$ .

Q. 2 From a group of 7 men and 6 women, five persons are to be selected to form a committee so that at least 3 men are there on the committee. In how many ways can it be done?

- [A] 564
- [B] 645
- [C] 735
- [D] 756
- [E] None of these

Answer Option [D]

**Explanation:**

We may have (3 men and 2 women) or (4 men and 1 woman) or (5 men only).

∴ Required number of ways =  $({}^7C_3 \times {}^6C_2) + ({}^7C_4 \times {}^6C_1) + ({}^7C_5)$

$$= \left( \frac{7 \times 6 \times 5}{3 \times 2 \times 1} \times \frac{6 \times 5}{2 \times 1} \right) + ({}^7C_3 \times {}^6C_1) + ({}^7C_2)$$

$$= 525 + \left( \frac{7 \times 6 \times 5}{3 \times 2 \times 1} \times 6 \right) + \left( \frac{7 \times 6}{2 \times 1} \right)$$

$$= (525 + 210 + 21)$$

$$= 756.$$

Q. 3 How many 4-letter words with or without meaning, can be formed out of the letters of the word, 'LOGARITHMS', if repetition of letters is not allowed?

- [A] 40
- [B] 400
- [C] 5040
- [D] 2520

Answer Option [C]

**Explanation:**

'LOGARITHMS' contains 10 different letters.

Required number of words = Number of arrangements of 10 letters, taking 4 at a time.

$$= {}^{10}P_4$$

$$= (10 \times 9 \times 8 \times 7)$$

- Q. 4 In how many ways a committee, consisting of 5 men and 6 women can be formed from 8 men and 10 women?
- [A] 266  
 [B] 5040  
 [C] 11760  
 [D] 86400  
 [E] None of these

Answer Option [C]

**Explanation:**

$$\begin{aligned}
 \text{Required number of ways} &= {}^8C_5 \times {}^{10}C_6 \\
 &= {}^8C_3 \times {}^{10}C_4 \\
 &= \left( \frac{8 \times 7 \times 6}{3 \times 2 \times 1} \times \frac{10 \times 9 \times 8 \times 7}{4 \times 3 \times 2 \times 1} \right) \\
 &= 11760.
 \end{aligned}$$

- Q. 5 In how many different ways can the letters of the word 'CORPORATION' be arranged so that the vowels always come together?
- [A] 810  
 [B] 1440  
 [C] 2880  
 [D] 50400  
 [E] 5760

Answer Option [D]

**Explanation:**

In the word 'CORPORATION', we treat the vowels OOAIO as one letter.

Thus, we have CRPRTN (OOAIO).

This has 7 (6 + 1) letters of which R occurs 2 times and the rest are different.

$$\text{Number of ways arranging these letters} = \frac{7!}{2!} = 2520.$$

Now, 5 vowels in which O occurs 3 times and the rest are different, can be arranged

$$\text{in } \frac{5!}{3!} = 20 \text{ ways.}$$

∴ Required number of ways = (2520 × 20) = 50400.

- Q. 6 In how many ways can a group of 5 men and 2 women be made out of a total of 7 men and 3 women?
- [A] 63  
 [B] 90

[C] 126

[D] 45

[E] 135

www.joblal.com

Answer Option [A]

**Explanation:**

$$\text{Required number of ways} = ({}^7C_5 \times {}^3C_2) = ({}^7C_2 \times {}^3C_1) = \left( \frac{7 \times 6}{2 \times 1} \times 3 \right) = 63.$$

[www.rrb2018.com](http://www.rrb2018.com) | [www.couponlal.com](http://www.couponlal.com) | [www.examlal.com](http://www.examlal.com) | [www.joblal.com](http://www.joblal.com) | [www.examy.com](http://www.examy.com)

Q. 7 **A box contains 2 white balls, 3 black balls and 4 red balls. In how many ways can 3 balls be drawn from the box, if at least one black ball is to be included in the draw?**

[A] 32

[B] 48

[C] 64

[D] 96

[E] None of these

www.joblal.com

Answer Option [C]

**Explanation:**

We may have (1 black and 2 non-black) or (2 black and 1 non-black) or (3 black).

$$\therefore \text{Required number of ways} = ({}^3C_1 \times {}^6C_2) + ({}^3C_2 \times {}^6C_1) + ({}^3C_3)$$

$$= \left( 3 \times \frac{6 \times 5}{2 \times 1} \right) + \left( \frac{3 \times 2}{2 \times 1} \times 6 \right) + 1$$

$$= (45 + 18 + 1)$$

$$= 64.$$

[www.rrb2018.com](http://www.rrb2018.com) | [www.couponlal.com](http://www.couponlal.com) | [www.examlal.com](http://www.examlal.com) | [www.joblal.com](http://www.joblal.com) | [www.examy.com](http://www.examy.com)

Q. 8 **In how many different ways can the letters of the word 'OPTICAL' be arranged so that the vowels always come together?**

[A] 120

[B] 720

[C] 4320

[D] 2160

[E] None of these

www.joblal.com

Answer Option [B]

**Explanation:**

The word 'OPTICAL' contains 7 different letters.

When the vowels OIA are always together, they can be supposed to form one letter.

Then, we have to arrange the letters PTCL (OIA).

Now, 5 letters can be arranged in  $5! = 120$  ways.

The vowels (OIA) can be arranged among themselves in  $3! = 6$  ways.

$$\therefore \text{Required number of ways} = (120 \times 6) = 720.$$

[www.rrb2018.com](http://www.rrb2018.com) | [www.couponlal.com](http://www.couponlal.com) | [www.examlal.com](http://www.examlal.com) | [www.joblal.com](http://www.joblal.com) | [www.examy.com](http://www.examy.com)

Q. 9 **In how many ways can the letters of the word 'LEADER' be arranged?**

- [A] 72  
 [B] 144  
 [C] 360  
 [D] 720  
 [E] None of these

www.joblal.com

Answer Option [C]

**Explanation:**

The word 'LEADER' contains 6 letters, namely 1L, 2E, 1A, 1D and 1R.

$$\therefore \text{Required number of ways} = \frac{6!}{(1!)(2!)(1!)(1!)(1!)} = 360.$$

[www.rrb2018.com](http://www.rrb2018.com) | [www.couponlal.com](http://www.couponlal.com) | [www.examlal.com](http://www.examlal.com) | [www.joblal.com](http://www.joblal.com) | [www.examy.com](http://www.examy.com)

Q. 10 In how many different ways can the letters of the word 'DETAIL' be arranged in such a way that the vowels occupy only the odd positions?

- [A] 32  
 [B] 48  
 [C] 36  
 [D] 60  
 [E] 120

www.joblal.com

Answer Option [C]

**Explanation:**

There are 6 letters in the given word, out of which there are 3 vowels and 3 consonants.

Let us mark these positions as under:

(1) (2) (3) (4) (5) (6)

Now, 3 vowels can be placed at any of the three places out of 4, marked 1, 3, 5.

Number of ways of arranging the vowels =  ${}^3P_3 = 3! = 6$ .

Also, the 3 consonants can be arranged at the remaining 3 positions.

Number of ways of these arrangements =  ${}^3P_3 = 3! = 6$ .

Total number of ways =  $(6 \times 6) = 36$ .

[www.rrb2018.com](http://www.rrb2018.com) | [www.couponlal.com](http://www.couponlal.com) | [www.examlal.com](http://www.examlal.com) | [www.joblal.com](http://www.joblal.com) | [www.examy.com](http://www.examy.com)

Q. 11 In a group of 6 boys and 4 girls, four children are to be selected. In how many different ways can they be selected such that at least one boy should be there?

- [A] 159  
 [B] 194  
 [C] 205  
 [D] 209  
 [E] None of these

www.joblal.com

Answer Option [D]

**Explanation:**

We may have (1 boy and 3 girls) or (2 boys and 2 girls) or (3 boys and 1 girl) or (4 boys).

$$\therefore \text{Required number of ways} = ({}^6C_1 \times {}^4C_3) + ({}^6C_2 \times {}^4C_2) + ({}^6C_3 \times {}^4C_1) + ({}^6C_4)$$

$$= ({}^6C_1 \times {}^4C_1) + ({}^6C_2 \times {}^4C_2) + ({}^6C_3 \times {}^4C_1) + ({}^6C_2)$$

$$= (6 \times 4) + \left( \frac{6 \times 5}{2 \times 1} \times \frac{4 \times 3}{2 \times 1} \right) + \left( \frac{6 \times 5 \times 4}{3 \times 2 \times 1} \times 4 \right) + \left( \frac{6 \times 5}{2 \times 1} \right)$$

$$= (24 + 90 + 80 + 15)$$

Q. 12 In how many different ways can the letters of the word 'LEADING' be arranged in such a way that the vowels always come together?

- [A] 360
- [B] 480
- [C] 720
- [D] 5040
- [E] None of these

Answer Option [C]

**Explanation:**

The word 'LEADING' has 7 different letters.

When the vowels EAI are always together, they can be supposed to form one letter.

Then, we have to arrange the letters LNDG (EAI).

Now, 5 (4 + 1 = 5) letters can be arranged in  $5! = 120$  ways.

The vowels (EAI) can be arranged among themselves in  $3! = 6$  ways.

∴ Required number of ways =  $(120 \times 6) = 720$ .

Q. 13 In how many different ways can the letters of the word 'MATHEMATICS' be arranged so that the vowels always come together?

- [A] 10080
- [B] 4989600
- [C] 120960
- [D] None of these

Answer Option [C]

**Explanation:**

In the word 'MATHEMATICS', we treat the vowels AEAI as one letter.

Thus, we have MTHMTCS (AEAI).

Now, we have to arrange 8 letters, out of which M occurs twice, T occurs twice and the rest are different.

∴ Number of ways of arranging these letters =  $\frac{8!}{(2!)(2!)} = 10080$ .

Now, AEAI has 4 letters in which A occurs 2 times and the rest are different.

Number of ways of arranging these letters =  $\frac{4!}{2!} = 12$ .

∴ Required number of words =  $(10080 \times 12) = 120960$ .

Q. 14 Out of 7 consonants and 4 vowels, how many words of 3 consonants and 2 vowels can be formed?

- [A] 210
- [B] 1050
- [C] 25200
- [D] 21400
- [E] None of these

Answer Option [C]

**Explanation:**

Number of ways of selecting (3 consonants out of 7) and (2 vowels out of 4)

$$= {}^7C_3 \times {}^4C_2$$

$$= \left( \frac{7 \times 6 \times 5}{3 \times 2 \times 1} \times \frac{4 \times 3}{2 \times 1} \right)$$

$$= 210.$$

Number of groups, each having 3 consonants and 2 vowels = 210.

Each group contains 5 letters.

Number of ways of arranging  
5 letters among themselves = 5!

$$= 5 \times 4 \times 3 \times 2 \times 1$$

$$= 120.$$

∴ Required number of ways = (210 × 120) = 25200.
